

Designed for obstetricians and midwives... ...by obstetricians and midwives...

...to suit every monitoring need.

④ Unobtrusive design of the smallest monitor in its class, improves the birthing environment.

⑤ Can be connected to major obstetrics management systems, including **SonicaidAxis** - the central review and archiving system of choice for 1-18 bed applications.

③ Clear screen graphics make it easy to monitor both mother and baby status at a glance.

② Twin ultrasound plus fetal and maternal ECG channels come as standard.

① Easily upgrades to include maternal blood pressure, temperature, maternal and fetal pulse oximetry options. Motion tolerant technology.

⑥ One-touch operation gives instant access to alarms and critical settings.

⑦ Standard operation without having to access complex menus, gives you more time to spend at the bedside.

⑧ Toco zero at the touch of a button.

⑨ Manual and automatic clinical event marker functions.

⑩ Memory feature enables paper change with no loss of data.

⑫ Records can be annotated from **EasiNotes**, a programmable library of clinical notes, available at the touch of a button.

⑪ Twin fetal heart rate scales provide the clearest differentiation between two heart rates and avoids the difficulty of interpreting offset or overlapping traces.

⑬ Colour coded for easy recognition. Optional Rimkus telemetry unit allows the mother greater freedom.

The **SonicaidFM800** range of monitors is designed to provide flexible solutions for your intrapartum monitoring needs today and in the future. A choice of models allows you to select the facilities you require, from standard intrapartum fetal monitoring capabilities to high-risk fetal or maternal care, and because the range is modular, each monitor can be upgraded as and when your needs change.

Intrapartum Fetal Monitoring

To help you with the management and care of all pregnancies, you need comprehensive and adaptable fetal monitoring facilities. The **SonicaidFM820** offers twin ultrasound and ECG channels, allowing fully flexible external monitoring of mother and fetus. In addition, the **SonicaidFM820** provides external and internal uterine activity monitoring, and maternally sensed fetal movements as standard.

Maternal Vital Signs Monitoring

For close monitoring of the mother as well as the fetus, the **SonicaidFM830** is a fully integrated system which allows the simultaneous monitoring of maternal ECG, pulse oximetry, blood pressure and temperature without the need for additional standalone devices.

Advanced Fetal Surveillance

Fetal pulse oximetry* is a new surveillance technique which provides direct measurement of fetal oxygen saturation during labour and delivery. The **SonicaidFM840** integrates Nellcor™ technology to provide the clinician with this additional parameter for assessing the fetal condition.

Complete Intrapartum Solution

The **SonicaidFM850** is the complete solution for high-risk intrapartum cases combining intrapartum fetal monitoring, maternal vital signs and fetal pulse oximetry* facilities.

* Fetal pulse oximetry is not currently available in the USA.

With...

Sonicaid8002 and SonicaidTrend

Each monitor can be equipped with **Sonicaid8002** or **SonicaidTrend** options, onboard. These unique analysis packages ensure a consistent approach to reading FHR patterns by all staff, and provide reassurance in reading difficult and rare FHR traces.

SonicaidLactate Pro

A true leap forward in fetal and cord blood testing. Lactate Pro provides rapid, bedside decision-making support from a tiny 5µl drop of blood in suspected cases of fetal acidosis.
